Dear Tim,

RE: THREE TOWNHOUSES LEGON ST, PORT MELBOURNE

We write to inform you of the tremendous success of your Concertina FOIL BATTTS have been on this project.

As you are aware mineral fibre insulation could not be used on this project because of the small cavity wall space. So with not too many options we took a chance on FOIL BATTTS as suggested by the project Architect, only to be pleasantly surprised with the easy installation.

The plasterers who installed the FOIL BATTTS were very impressed, taking the same time to install as mineral fibre batts, that did not leave the itching, scratching, wheezing and coughing for the rest of the day.

It is obvious that with time there will be a greater acceptance not only of the personal discomfort but the long term effects of inhalation of the minute fragments of mineral fibres. It has already been mooted that mineral fibres will have to be encapsulated before handling on site.

We were so impressed with the FOIL BATTTS that we will be using them in preference to mineral fibre batts on other projects.

Yours Faithfully,

PETER MAY
